→ Durable travel case
Boost your hearing aids

- Connect a neck loop and Domino further amplifies speech
- Practical remote for easy adjustment of volume, tone and microphones
- Amplifies the TV sound in your hearing aid
How it works

SpeechReceiverTransmitter

Wireless broadband

Speech Transmitter Receiver Speech
Ideal listening situations

- One-on-one conversations
- Listening to the television
- Small meetings e.g. a café
- At work Meeting/seminar
- In school
- During class
- Outdoors
- Taking a walk
- In stores
- Talking to a clerk
- Listening to music, Stereo, MP3 player…
At work

When more than one person speaks at the same time it can be really hard to distinguish what is being said.

Domino helps you to hear better in these situations and you can easily place the transmitter close to a distant speaker.
In class

Even if you are sitting in the back, you can hear the teacher as he was sitting next to you. Clear and noise free.

If you want to communicate with a schoolmate beside you, just push the “Push To Listen” button to pick up sound from your close environment.
At home

Connect your Domino Classic transmitter to the TV and sit back and enjoy perfect sound in full stereo. No need to crank up the volume to the max.

When you want to discuss the film, you can easily mix the sound from the TV with the internal microphones on the receiver. “Push To Listen”
Outdoors

When you are out for a walk, speech is often directed away from you. This in combination with traffic noise makes it very difficult to follow a conversation.

Domino suppresses the noise and overcomes the distance from the speaker very effectively.
With hearing aid

Improves the performance of your hearing aids radically. Especially when listening to speech at a distance.

Great for watching TV or listening to music.

Acts as a remote for easy adjustment of tone and volume
Receiver
