

Hear the difference

Discover the Domino listening system

Domino helps people with hearing loss to hear better in busy situations, where hearing aids or cochlear implants alone may not be enough. It brings out the words so you can hear them loud and clear – even at a distance or when there's a lot of going on in the background.

Use it for example on your business meeting, when you're out dining with friends, or to hear a distant speaker at a seminar.

Hear the difference at:
bellman.se/domino

Domino uses digital technology to enhance speech and filter out unwanted background noise before it reaches your hearing aid or speech processor. The clean and crisp sound makes it easier to hear the words so you can join the conversation without effort.
